OUR TOWN

A Framework for Understanding and Measuring the National Endowment for the Arts’ Creative Placemaking Grants Program

Updated February 2021
This publication is an update of the previous NEA report, OUR TOWN: A Theory of Change and Logic Model for the National Endowment for the Arts’ Creative Placemaking Grants Program.

February 2021

Preface

In 2011, the National Endowment for the Arts made its first Our Town creative placemaking grants. By the end of fiscal year 2020, more than 560 projects had been funded via Our Town in rural, tribal, suburban, and urban communities. Over the last decade, creative placemaking has evolved in notable ways, and the moment felt ripe for delving into past Our Town projects to better reflect on and document the outcomes of creative placemaking work, and of Our Town in particular. Our team undertook a substantial effort to revisit past projects and evolving practices and to establish a theory of change and logic model for the Our Town program, with help from the agency’s Office of Research & Analysis.

This document caps an iterative and collaborative process between the agency and 2M Research Services, which was contracted to produce and validate a theory of change and logic model for Our Town (see definitions of these terms in the Introduction). We view the release of this document as a way to support efforts in the creative placemaking field that aim to articulate and assess the positive changes that arts and cultural strategies are producing in communities across the country. While artists, designers, and culture-bearers have engaged in creative placemaking activities for decades, the impact of such activities is formidable tough to measure or quantify. This challenge is not unique to creative placemaking. Place-based housing, transportation, and economic development programs and investments are similarly experimenting with new frameworks for measuring and assessing impact in communities. Interviews with a range of evaluators, practitioners, and federal partners helped us to generate new ideas on how to articulate the impacts of place-based work and creative placemaking in particular.

The National Endowment for the Art’s Our Town theory of change illustrates how local creative placemaking projects have led to notable local social, economic, and/or physical impacts. Collectively, Our Town projects have helped to drive a systemic shift in how other sectors embrace arts and culture as a critical ally in advancing local goals. Artists, designers, and culture-bearers can offer fresh and creative ideas to address community challenges in new ways. These varied artistic and creative strategies, cross-sector partnerships, and unique community contexts have led to inspiring local innovations which have been replicated, scaled, and adopted by the broader community development sector. In addition to the Our Town program, many other actors have played a significant role in driving this systems shift. They include national and local philanthropic foundations, public and nonprofit organizations, the private sector, and resident leadership.

In 2019, the Our Town grant guidelines and grantees reporting requirements were rewritten to reflect the program’s theory of change. The updated grant guidelines were designed to inspire a broader understanding of creative placemaking strategies and potential impacts. Local creative placemaking practice has continued to evolve in exciting ways. The new grant guidelines better reflect this evolution.

The framework shared in this report should not be seen as the final statement on how Our Town works, but rather should serve to mark a moment in time. We acknowledge that creative placemaking projects are often iterative and not easily bound to the boxes or linear flow of a logic model. Similarly, measuring outcomes of arts and culture often fail to capture the full breadth of their transformative nature for individuals and communities. And yet, our hope is that this document shows just how powerful creative placemaking can be and the particular promise it holds at a time when we collectively face an unknown future in the midst of a global pandemic, while reckoning with a long history of racial injustice. In communities across the country, artists, designers and culture-bearers can offer new ways forward;
connecting, envisioning, inspiring, and energizing. We sincerely hope this document offers inspiration for this moment and also helps to guide grantees, future applicants, local leaders, researchers, evaluators and others in better understanding and measuring the multiple ways that creative placemaking drives not only local impact, but broader systems change.

Jen Hughes
Design and Creative Placemaking Director
Introduction

From fiscal years 2011 through 2020, the National Endowment for the Arts awarded over $40.6 million to arts, design, and cultural projects nationwide through its Our Town grant program. Our Town supports creative placemaking projects that help to transform communities into lively, beautiful, and resilient places. These grants support projects that integrate arts, culture, and design activities into efforts that strengthen communities by advancing local economic, physical, and/or social outcomes. Our Town requires partnerships between arts organizations and government, other nonprofit organizations, and/or private entities. Successful Our Town projects ultimately lay the groundwork for systemic changes that sustain the integration of arts, culture, and design into strategies for strengthening communities.

In 2016, the Arts Endowment sought to develop an evaluation plan for Our Town that would capture the measures of greatest importance to quantify the impact of the initiative. 2M Research Services, along with its subcontractor, Metris Arts Consulting, and subject matter experts Terry Clark, Carl Grodach, and Dan Silver were awarded a contract to begin the process of evaluation planning by developing key materials to guide the evaluation, including a theory of change and logic model.

The logic model, theory of change, and measurement model are tools used by program managers and evaluators to describe how a program is supposed to work and how its impacts on American communities should be measured. A theory of change offers a framework that visually depicts the elements needed to support the program’s success. A theory of change identifies those elements across major program phases, and the expected trajectory between these phases and the program’s outcomes. The best theory of change is one the reader can review to understand the underlying hypotheses of a grant program’s rationale. The logic model provides more clarity about the components (i.e., inputs) that need to be in place for the program to work, along with visual depictions of how planned activities will result in specific outputs or products, and outcomes. The logic model offers a closer look at the details of how a grant program is meant to work, and what grantees are doing locally to lead to the expected results. The measurement model specifies indicators and potential data sources for each concept in the logic model. Together, these products offer a framework for Our Town project design, performance monitoring, and evaluation.

The Our Town framework was developed through an iterative process that occurred over the course of more than a year. The first phase of this process involved analyzing existing data from Our Town grantees, including grant applications, grantee final reports, and existing case studies available on the agency’s Exploring Our Town website; interviewing national experts on topics related to creative placemaking program implementation and evaluation; and conducting a scan of place-based programs and tools. A technical working group offered constructive criticism on early drafts of the framework. During the second phase of this process, a national survey of Our Town grantees and in-depth case studies of selected grant projects enabled the agency to validate the framework. The final theory of change and logic model are described in the next section; the measurement model is presented in the appendix table appended to this report.

---

Our Town Theory of Change and Logic Model

The Our Town theory of change, focused how Our Town is on systems change, offers a high-level conceptual framework that situates the Our Town program as part of a national effort to increase the use of arts, design, and cultural strategies in community development across the nation.

By contrast, the logic model focuses on how Our Town is implemented at the individual grant level. It reflects project-level context, inputs, activities, and outputs to illustrate the ways in which those elements aggregate and culminate to influence innovation and systems change at a local level.
THEORY OF CHANGE

PROBLEM STATEMENT: American communities everywhere face a distinctive set of local economic, physical, and/or social challenges. Yet, community leaders are often unaware of solutions that stem from the successful adoption and integration of arts, design, and cultural strategies.

Local Inputs
- Leadership
- Cross-sector Partnerships
- Financial Resources
- Community Engagement

Arts, Culture, & Design Tactics
- Imagine/Envision
- Connect
- Illuminate
- Energize

Innovation/Systems Change Outcomes
- Project activities as well as local community changes lead to innovation/systems change.

Increased integration of arts, design, and cultural strategies among local, cross-sector partners, leading to incremental economic, physical, and social change

National Change
Sustained support and recognition of arts, design, and cultural strategies as integral to every phase of community planning and development across the United States
**Project Community Contexts**
Local Our Town projects respond to and are shaped by community type, existing social and human capital, existing policies, local assets, and other community development activities.

**Project Inputs**
- Leadership
- Cross-sector Partnerships
- Financial Resources
- Community Engagement

**Project Activities**
Creative placemaking strategies strengthen local communities by:
- Envisioning
- Connecting
- Illuminating
- Energizing

Arts tactics advance creative placemaking strategies through:
- Artist residencies
- Arts festivals
- Community co-creation of art
- Performances
- Public art
- Cultural planning
- District planning
- Creative asset mapping
- Public art planning
- Artist/designer-facilitated community planning
- Design of artist space
- Design of cultural facilities
- Public space design
- Creative business development
- Professional artist development

**Innovation/Systems Change Outcomes**
Project activities as well as local community change lead to:
- New or sustained partnerships
- Sustaining or scaling of project activities
- Replication or adaptation of project activities by other organizations
- Capacity to implement creative placemaking
- Institutionalization of arts, culture, and design

**Local Community Change Outcomes**
Increased integration of arts, design, and cultural strategies among local, cross-sector partners, leading to economic, physical, and social change.

**Economic Change**
- Local business and job growth
- Professional development/training

**Physical Change**
- Beautification
- New construction

**Social Change**
- Civic engagement
- Social cohesion
- And more
Our Town Theory of Change

The Our Town theory of change illustrates how and why the grant program is expected to contribute to increased integration of arts, design, and cultural strategies in community development across the nation.

A problem statement included in the theory of change offers a rationale—the “why”—for the Our Town program. The problem statement emphasizes a variety of challenges faced by local communities while recognizing that art, culture, and design-based strategies remain underutilized as solutions. The narrative below includes the full-length version of the problem statement.

**Problem Statement:**

American communities everywhere face a distinct set of local economic, physical, and/or social challenges (including in agriculture and food, economic development, education and youth, environment and energy, health, housing, public safety, transportation, and workforce development). And yet, community leaders are often unaware of solutions that can arise from the successful adoption and integration of arts, design, and cultural strategies into their community development activities. Through the Our Town program, partners from public, private, nonprofit, and community sectors turn to art, culture, and design activities to address local challenges.

The theory of change proposes that Our Town grants, coupled with the support of local leadership, cross-sector partnerships, financial resources, and community engagement (“local inputs”), enable communities to use arts, culture, and design strategies to address local challenges. These activities lead to “local community change,” described in the theory of change as “increased integration of arts, design, and cultural strategies among local, cross-sector partners, leading to economic, physical, and social change.” Our Town grants also can directly and intentionally contribute to systems level changes in their target communities. A more detailed explanation of the mechanisms of grant projects is presented in the Our Town logic model that follows.

Ultimately, the cumulative effect of these local community changes and systems level changes supported by Our Town grant awards, contributes to “national change,” which is defined in the theory of change as “sustained support and recognition of arts, design, and cultural strategies as integral to every phase of community development across the United States.” This systems-level change is more fully described in the program goal for Our Town:

**Program Goal:**

Ultimately, the collective Our Town portfolio helps to advance and sustain the increased integration of art, culture, and design activities in community development through diverse, cross-sector partners. As projects unfold across the country, both the process of the Our Town activity and the local economic, social, and physical changes resulting from the projects help validate the creative placemaking approach. Our Town spurs government agencies, policymakers, elected officials, foundations, community organizations, private sector interests,
and other stakeholders to increasingly incorporate art, culture, and design activities into their community development activities.

The theory of change acknowledges that the Our Town grantmaking program is not alone in accomplishing this goal but exists amid complementary work conducted by other national and local champions. The agency works in concert with other funders, non-arts leaders in community development, and other thought leaders to strengthen the field of creative placemaking through promotion of standards of practice, development of a shared knowledge base, cultivation of leadership, grassroots support, shared identity, and provision of funding and supporting policy. In the theory of change, these complementary activities are reflected by “local champions” and “national champions” in the model.

Our Town Logic Model

The Our Town logic model provides a closer look at how grant projects are expected to work and what grantees are doing locally to lead to the expected results.

Project Inputs

Essential ingredients for Our Town projects are the local inputs of leadership, partners, financial resources, and community engagement:

- **Leadership**: The project’s lead and primary partnership organizations that direct and steer project activities. Leadership also includes support from the highest-ranking elected official of local or tribal government. Depending on the partnership makeup, leadership may include committed governmental, nonprofit, civic, and private sector leadership.

- **Cross-sector partnerships**: The required Our Town partnership between a local government agency and a nonprofit organization, one of which must have an arts/culture/design mission. Additional partnerships on the Our Town projects may cut across private, public, and nonprofit sectors, as well as community development sectors (e.g., health, public safety, transportation, economic development, education, housing, infrastructure).

- **Financial and in-kind resources**: Funds or in-kind resources available to the grantee that can support the implementation of the project activities. This includes the grant provided by the Arts Endowment as well as matching/other funds and/or in-kind contributions provided by local government, business, nonprofit, and other stakeholders.

- **Community engagement**: Participation and support from local community leaders and residents, in both the creation of the shared vision and execution of the project activities.

---

Project Community Contexts

Importantly, local Our Town projects unfold in varied and complex community contexts. Similar to other complex place-based change efforts, Our Town projects typically focus on efforts to improve outcomes (physical, social, economic) that relate to a defined geography; work comprehensively across one or more sectors (agriculture and food, economic development, education and youth, environment and energy, health, housing, public safety, transportation, and workforce development, and at one or more levels—individual, family, organization, community, systemic); and value community-building. As noted in the logic model, Our Town projects are responsive to and shaped by community type, existing social and human capital, existing policies, and local assets:

- **Community type**: Place-based Our Town projects occur in neighborhoods, tribal reservations, or communities, towns, cities, and regions. Settings vary in population size and demographics, geographic scale, urban, rural, or suburban character, and market dynamics.

- **Social and human capital**: The collective knowledge, skills, relationships, and experience of the people in the places that projects can build on and use to successfully implement the project activities.

- **Existing policies**: The policies or legislation in place that enable or impede the implementation and the success of the project.

- **Local assets**: Aspects of the community that hold meaningful aesthetic, historical, or economic value and that make a place unique. Projects can leverage and enhance these local assets, which can include people, places, institutions, physical or civic infrastructure, and customs.

- **Other community development activities**: Activities distinct from Our Town that are improving the local community. These can be the activities of for-profit firms, chambers of commerce, or other actors in the business community; state or federal government programs or grant money; community organizations, community organizers, and/or residents; or local government agencies.

Activities

Our Town project grantees and their partners pair specific creative placemaking strategies with one or more art, culture, or design-based tactics. In isolation from the strategies, tactics do not constitute creative placemaking.

**Creative Placemaking Strategies** are the approaches cross-sector partners adopt to address local challenges. The inclusion of arts, culture, and design-based tactics as part of community development work can uniquely position cross-sector partners to:

- **Envision**: Imagine new possibilities for a community or place—a new future, a new way of overcoming a challenge, or a new approach to problem-solving

---

• **Connect**: Bring together communities, people, places, and economic opportunity via physical spaces or new relationships

• **Illuminate**: Bring new attention to or elevate key community assets and issues, voices of residents, local history, or cultural infrastructure

• **Energize**: Inject new or additional energy, resources, activity, people, or enthusiasm into a place, community issue, or local economy

**Art Tactics** are the tools that cross-sector partners use to advance their creative placemaking strategies. Art tactics span arts engagement, cultural planning, design, and artist and creative industry support:

**Arts Engagement:**

- **Artist residency**: A program designed to strategically connect artists with the opportunity to bring their creative skill sets to non-arts institutions, including residencies in government offices, businesses, or other institutions

- **Arts festivals**: Public events that gather people, often in public spaces or otherwise unexpected places, to showcase talent and exchange culture

- **Community co-creation of art**: The process of engaging stakeholders to participate or collaborate alongside artists/designers in conceiving, designing, or fabricating a work or works of art

- **Performances**: Presentations of a live artwork (e.g., music, theater, dance, media)

- **Public art**: A work of art that is conceived for a particular place or community, with the intention of being broadly accessible and often involving community members in the process of developing, selecting, or executing the work; temporary public art is meant for display over a finite period of time using easily-removed materials, and is often used to prototype an idea, product, or process.

**Cultural Planning:**

- **Cultural planning**: The process of identifying and leveraging a community's cultural resources to inform decision-making (e.g., creating a cultural plan, or integrating plans and policies around arts and culture as part of a city master planning process)

- **District planning**: The process of identifying a specific geography with unique potential for community and/or economic development based on cultural assets (e.g., through designation, branding, policy, plans, or other means)

- **Creative asset mapping**: The process of identifying the people, places, physical infrastructure, institutions, and customs that hold meaningful aesthetic, historical, and/or economic value that make a place unique
• **Public art planning**: The process of developing community-wide strategies and/or policies that guide and support commissioning, installing, and maintaining works of public art and/or temporary public art

**Design:**

• **Artist/designer-facilitated community planning**: Artists/designers leading or partnering in the creative processes of visioning and developing solutions to community issues

• **Design of artist space**: Design processes to support the creation of dedicated spaces for artists to live and/or to produce, exhibit, or sell their work

• **Design of cultural facilities**: Design processes to support the creation of a dedicated building or space for creating and/or showcasing arts and culture

• **Public space design**: The process of designing elements of public infrastructure, or spaces where people congregate (e.g., parks, plazas, landscapes, neighborhoods, districts, infrastructure, and artist-produced elements of streetscapes)

**Artist and Creative Industry Support:**

• **Creative business development**: Programs or services that support entrepreneurs and businesses in the creative industries, or help cultivate strong infrastructure for establishing and developing creative businesses

• **Professional artist development**: Programs or services that support artists professionally, such as through skill development or accessing markets and capital

**Project Outputs**

The art tactics used by Our Town partners yield concrete, tangible **project outputs** that demonstrate whether the partners successfully implemented project activities as planned, and thus, whether the intended outcomes of the project should be realized. Project outputs include participation in art tactics, offerings/deliverables produced by the art tactics, and quality. Outputs followed by an asterisk (*) are currently tracked through final descriptive reports completed by Our Town grantees.

**Participation**

• Count of participants (live or virtual)*

• Diversity of participants
  
  o People compensated/hired*
  
  o Race/ethnic groups*
  
  o Age groups*
- Underserved/distinct groups (i.e., military veterans/active duty personnel, at-risk youth, or individuals with disabilities, in institutions such as hospitals or homeless shelters, below the poverty line, or with limited English proficiency)*

- New participants

- Artists

- Creative businesses

- Other subgroups/special populations

**Offerings/Deliverables**

- Number of arts engagement offerings
  - Hours artists were in residence*
  - Fairs/festivals held*
  - Exhibitions curated/presented*
  - Concerts/performances/readings*
  - Arts instruction activities*
  - Works of art co-created by artist and non-artist residents (visual art and/or other art forms)
  - Professional original works of art created*
  - Works of art installed in public spaces* (distinguish between permanent and temporary)

- Number of cultural planning deliverables
  - Community action plans, including plans for arts/cultural districts, creative industry hubs/districts/clusters, and public art*
  - Cultural asset maps

- Number of design deliverables
  - Feasibility, predevelopment, and other design plans for artist space, cultural facilities, and public space*
  - Renderings

- Number of artist/creative industry offerings
o Programs/service hours to support creative business/artists’ professional development
o Sum of dedicated funds

Quality

• Quality of participation
  • Active, passive, one-off or repeatedly participating, etc.

• Quality of offerings/deliverables
  o Participant perception, partners/leadership perception, etc.

Outcomes: Local Community Change

Our Town projects can help generate economic, physical, and social changes in local communities; these projected outcomes are shared in the logic model. In the corresponding appendix table, these high-level outcomes are described in greater detail, providing specific, measurement-oriented short-term and intermediate outcomes. The table also links outcomes to creative placemaking strategies employed via Our Town projects and includes citations of sources and methods.

Our Town projects encompass an incredibly broad array of activities (arts engagement, cultural planning, design, and artist and creative industry support in combination with creative placemaking strategies) and address a wide range of locale-specific economic, physical, and social challenges, as described above. Accordingly, the activities employed and objectives sought in a specific project will only advance a small subset of outcomes. For example, in-migration may be a desirable goal for a neighborhood or town suffering from population loss, whereas preventing or mitigating displacement would be desired in a rapidly gentrifying area. Along similar lines, because Our Town projects occur in dynamic places, concurrent efforts may reinforce, amplify, or curb an Our Town project’s outcome.

Types of project outcomes include:

• Economic Change: Economic improvements of individuals, institutions, or the community
  o Local business growth: Increases in business activity and business diversity in the community
  o Job creation/labor force participation: Increases in jobs and in people looking for and finding work
  o Professional development/training: Increases in artists/residents’ knowledge, skills, and employability
  o Prevention of displacement: Decreases in the displacement of low-income residents that desire to remain in the neighborhood
  o In-migration: Increases in new residents in the community
Tourism: Increases in visitors to the community

Physical Change: Design of physical improvements to the built and natural environments

- Beautification and/or enhancement of physical environment: Physical improvements to the community that improve its aesthetic appearance
- New construction and redevelopment (including arts, culture, and public space): Physical improvements to the community that address decline and improve infrastructure

Social Change: Improvements to social relationships, civic engagement, community empowerment, and/or amplifying community identity

- Civic engagement: Increases in active participation in efforts deliberately intended to positively influence public life and community and contribute to a sense of belonging
- Collective efficacy: Increases in social cohesion among neighbors combined with their willingness to act in support of the common good
- Social capital: Increases in the “community stock of social trust and norms of reciprocity embedded in social networks that facilitates collective actions”; concepts associated with social capital include social networks, sense of community, and social cohesion
- Social cohesion: Increases in the shared sense of community, attraction-to-place, patterns of regular interaction among community members, and a sense of trust and mutuality
- Community attachment: Increases in pride, interest, and satisfaction with the physical and social/cultural aspects of one’s neighborhood

---

Outcomes: Systems Change

Both the process of undertaking Our Town projects and the positive local changes they engender build community capacity, and ultimately can advance systems change at the local level to sustain the increased integration of art, culture, and design activities in community development. In some projects, local systems change—defined as a fundamental change in community policies, processes, relationships, and power structures, as well as deeply held values and norms—9—is also an intentional and direct outcome. For example, an artist residency project may place artists in a local government agency to facilitate creative solutions and new ways of working in community development. Both increased familiarity and proof-of-concept result in increased and sustained local uptake.

Through Our Town projects, public, private, nonprofit, and community-based entities strengthen or forge new or sustained partnerships that increase community capacity. These collaborations focus on the integration of arts and culture in community development during or following Our Town projects. Through these collaborations, partners gain first-hand exposure to new ways of working and observe that innovative art, culture, and design-based solutions generate desired economic, physical, and social community changes. Partnerships with governmental organizations open avenues for sustaining and scaling of project activities beyond the initial scope of the project. Our Town grantees that collaborate with evaluators and technical assistance organizations increase capacity of grantee organizations for future creative placemaking work, while partnerships with community organizations facilitate sustained collaboration with key community groups.

Project sustainability (i.e., a community’s long-term maintenance of resources, support, and capacity to sustain a creative placemaking project over time) evolves with time. Activities are implemented in Our Town communities following the grant period by grantees and their partners, or other organizations in hopes of achieving similar outcomes. Facilitated by new or sustained funding, project activities may be sustained or scaled to meet the needs of the target community.

External (non-grantee) organizations can replicate or adapt project activities and broaden the scope of Our Town projects’ impacts to other communities and organizations. External organizations, including development corporations, and other arts and culture organizations, observe grantees implementing Our Town initiatives as partners and collaborators or as local, regional, or national stakeholders in creative placemaking. Through observing, organizations learn from the grantee projects’ successes and challenges and adapt successful components for their own programs. In this way, external organizations are learning from successful Our Town initiatives and implementing proven arts integration tactics to meet similar program goals among their respective target populations.

Knowledge resulting from Our Town projects that builds capacity to implement creative placemaking in the future. Our Town grants implement activities that contribute to knowledge in the creative placemaking field, develop standards of practice, and initiate opportunities for learning and communicating the successes of different creative placemaking strategies. Our Town projects deepen the bench of successful artists pursuing creative placemaking in locally, regionally, and nationally and

---

help grantees build capacity to implement creative placemaking in their target communities, especially when there are several iterations of the project.

Finally, development of new organizational norms and new policies help institutionalize arts, culture, and design practices in community planning and development at the local and national levels. Our Town project success precipitates an “aha moment,” in which individuals involved in the project and the larger community realize the value of the creative placemaking approach and begin to adopt organizational norms that help to institutionalize arts, culture, and design in community work. Our Town project success also spurs stakeholders and partners to adopt and implement laws, policies, and regulations to institutionalize arts, culture, and design in community work.

Our Town Measurement Model

The Our Town theory of change and logic model provided the foundation for the development of a measurement model – a comprehensive list of outcomes, metrics, and data sources that offers a starting point for future performance measurement and evaluation of the Our Town program. The measurement model also offers grantees a useful resource for monitoring and evaluating the performance of Our Town projects. Grantees are advised to select measures best aligned with their project design. Please refer to the accompanying appendix table (Table A-1) for more information.

The measurement model is strongly focused on outcomes, including local community change outcomes (economic, physical, social) and innovation/systems change outcomes. Funding agencies, including the Art Endowment, ask grantees to report on outcomes as part of grant reporting, yet outcomes associated with creative placemaking are challenging to measure within or immediately following a grant period. Fortunately, Arts Endowment research on Our Town projects found that there are early indications associated with systems change outcomes that can be tracked and reported to demonstrate near-term progress. These early indications include:

1. **Newly formed partnerships** enhance expertise, increase access to the local community, and enhance funding potential

2. **Sustained partnerships that will continue beyond the grant period** increase capacity to sustain program activities and integrate arts, culture, and design in other activities

3. **Active communication of project successes** especially in rural or high need areas, can lead to increased opportunities for funding, new partnerships, and longer-term integration of arts, culture, and design in community development

4. **Increased receptivity to the arts and creative placemaking** at the local level, which builds buy-in to the creative placemaking approach and facilitates systems change (can result from early indication 3 or active participation in project activities). During and following Our Town initiatives, stakeholders, communities, and participants realized the value of creative placemaking in strengthening communities, which increased these parties’ willingness to and interest in participating in future creative placemaking projects.

5. **New community and organizational expectations for community engagement** increase the likelihood that the community and organization will demand similarly engaged/interactive processes to ensure ongoing development reflects community needs and culture
6. **Positive grantee reputation** among the arts community and within the local context positions organizations as forces of positive change in their communities and enhances their ability to sustain their work and influence systems change.

7. **Artists trained in creative placemaking** can sustain/replicate program activities, increase organization’s capacity, and perpetuate the successes of projects.

8. **Project outputs that include actionable policy changes (e.g., recommendations, plans, findings)** influence and shape municipal organizations conversations related to policies, norms, and practices, and lead to the institutionalization of arts, culture, and design.

9. **New hires or positions in grantee organization** increase organizational capacity to sustain project activities and influence organizational norms, policies, and practices.

the grant period increase capacity to sustain program activities and integrate arts, culture, and design in other activities; 3) Active communication of project successes especially in rural or high need areas, can lead to increased opportunities for funding, new partnerships, and longer-term integration of arts, culture, and design in community development; 4) Increased receptivity to the arts and creative placemaking at the local level, which builds buy-in to the creative placemaking approach and facilitates systems change (can result from early indication 3 or active participation in project activities). During and following Our Town initiatives, stakeholders, communities, and participants realized the value of creative placemaking in strengthening communities, which increased these parties’ willingness to and interest in participating in future creative placemaking projects; 5) New community and organizational expectations for community engagement increase the likelihood that the community and organization will demand similarly engaged/interactive processes to ensure ongoing development reflects community needs and culture; 6) Positive grantee reputation among the arts community and within the local context positions organizations as forces of positive change in their communities and enhances their ability to sustain their work and influence systems change; 7) Artists trained in creative placemaking can sustain/replicate program activities, increase organization’s capacity, and perpetuate the successes of projects; 8) Project outputs that include actionable policy changes (e.g., recommendations, plans, findings) influence and shape municipal organizations’ conversations related to policies, norms, and practices, and lead to the institutionalization of arts, culture, and design; 9) New hires or positions in grantee organization increase organizational capacity to sustain project activities and influence organizational norms, policies, and practices.
